Brazil

Habitat for Humanity Brazil

Habitat for Humanity Brazil began its work in 1992, after a flood struck the city of Belo Horizonte affecting hundreds of families. Since then, Habitat Brazil has developed projects in 12 states and served over 60,000 people. Currently Habitat is present in six states with projects ranging from building, repairing and improving homes, to providing access to water and strong advocacy work.

The housing need in Brazil

Brazil has between 6 and 8 million fewer houses than it needs, and people earning less than US$1,000 per month account for about 90% of this deficit. In the cities, there is overcrowding and housing deterioration. It is estimated that more than 50 million Brazilians live in inadequate conditions. According to data from several sources, 26 million people in urban areas lack access to drinking water, 14 million do not have trash collection services and 83 million are not connected to sewage systems.

Rural areas in the northeast region are currently suffering the worst drought in the past 50 years. Access to water is a privilege that over 21 million people do not have. Women and children are forced to walk long distances to fetch water for their homes, often in sources where the water is untreated.

Habitat’s contribution in Brazil

To date, Habitat Brazil has helped build 5,000 homes, improved 2,045 homes, provided water access to 480 families and helped 2,420 families secure land tenure. Habitat Brazil through its participation in national platforms and networks such as the National Forum for Urban Reform and the National Cities Council, promotes public policies that benefit millions of people living in inadequate conditions.
Maria Lucia is a single working mother. She works night shifts while her 7-year-old daughter is cared for by her grandmother. Maria Lucia’s house was extremely small and dark, with almost no ventilation or natural lighting. Her daughter often missed school due to respiratory illnesses related to mold inside their home.

Through Habitat’s renovations project, Maria Lucia had access to a microcredit loan to improve her home. Beyond the regular construction work that the house required, Maria Lucia’s home also received sustainable solutions for saving water and electricity. This means that she is saving over 50% on her utilities bills. She has lowered her financial burden. But more importantly, she can rest assured that her family lives in a safe and healthy environment.

Meet a Habitat family
